

Outflow — High-Level Flow (V2, corrected)

An expense tracker you talk to instead of maintaining

Legend

Yellow box AI module (LLM call) Green box Rule-based / code, no AI Red box Human-in-the-loop checkpoint Blue box User input Grey box Stored data / code output

V2 additions vs. V1: Module 1a (receipt-authenticity triage), duplicate-check warning, dynamic + appendable category dropdown, resolve_relative_range() date resolution in Module 2. Schema is unchanged from V1 (5 fields; no per-row flag columns). Corrects the earlier v2 diagram, which described a separate DeepSeek-based “Module 3” and a 9-field schema that were never built.
